

# Fuel Cycle Simulation Tools and Physical Models (1/2)

29/06/2021 - Introduction

*Xavier Doligez*

## ➤ Back to yesterday's session :

- Why ? Who are we talking to ? What kind of outputs ? How ?
  - *Politics, stakeholders, decision makers, students, physicists,...*
  - *Based on the physical analysis of a complex system*
- Back to Paris 2018 : why are we developing fuel cycle simulation software ?
  - *Master models, biases, uncertainties,...*
  - *Integrate our competences, build a community,...*
  - *Complexity in accordance with goals (from spreadsheets to very complex software)*
- Since the first TwoFCS, software development and specificities have dedicated sessions
  - TwoFCS Paris 2016 : COSI6, ANICCA, CLASS, CYCLUS, Tr\_Evol, DANESS, COSAC, FANCSEE, MIXOPTIM...
  - TwoFCS 201x : DYMOND, ORION, VISION, COSI7,...
  - *TwoFCS 2021 : updates and new comers*

Tomohiro  
Okamura

➤ TwoFCS 2018 :

→ “Understanding the behavior of a fuel cycle begins with understanding the physics in the reactor core” - *Brent Dixon*

- Great effort to reactors models / Precise description of the isotopic evolution during irradiation

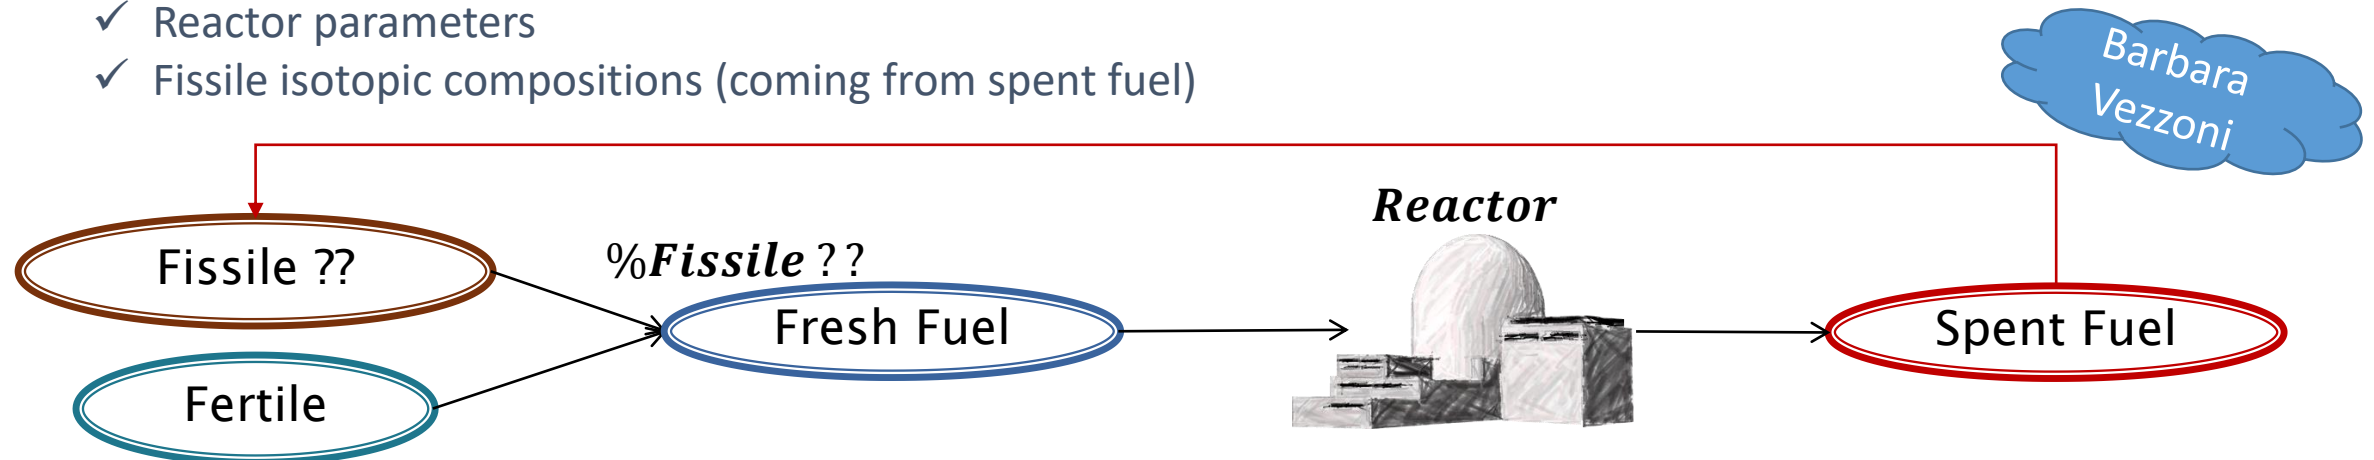

→ **Irradiation Model : Calculation spent fuel composition**

✓ Resolution of Bateman’s equations :

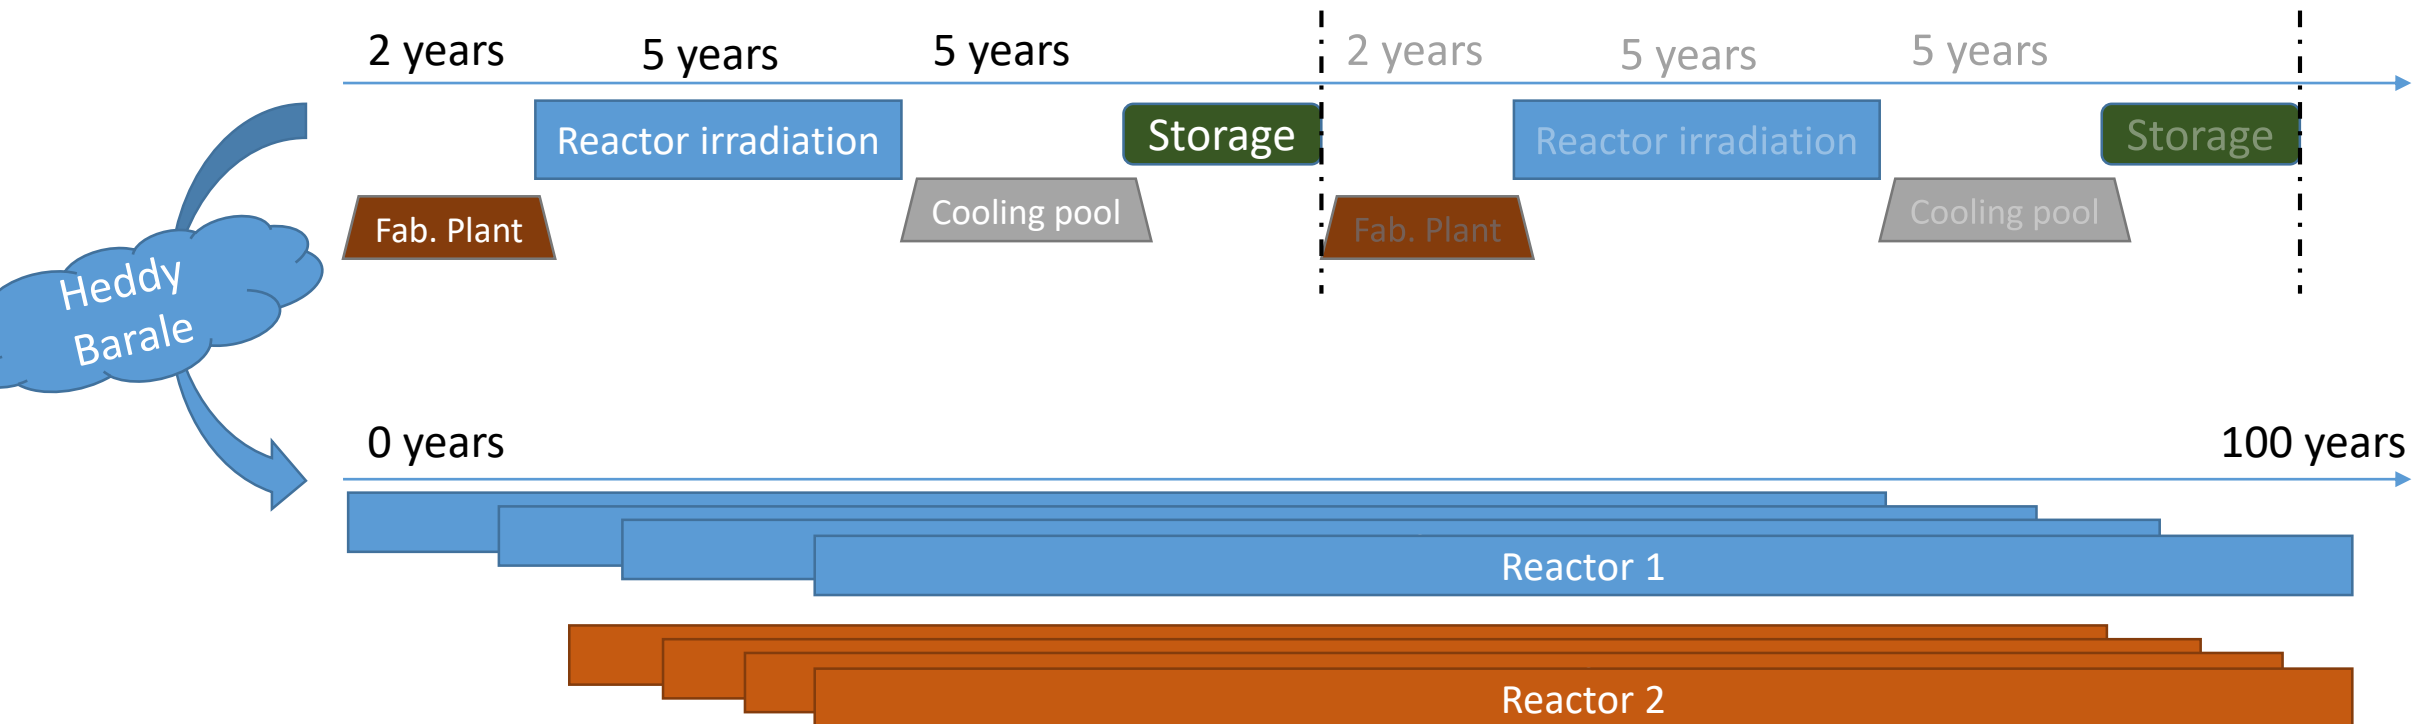

$$\frac{dN_i}{dt} = \underbrace{\sum_j N_j R_j \sigma_j^{j \rightarrow i} \phi + \sum_j \lambda_j^{j \rightarrow i} N_j}_{\text{Apparition}} - \underbrace{N_i \sigma^{abs} \phi - \lambda_i N_i}_{\text{Disappearance}}$$

→ **Fuel Loading Model : Calculation of the fresh composition function of:**

- ✓ Reactor parameters
- ✓ Fissile isotopic compositions (coming from spent fuel)

- From reactor simulations to scenario studies :
  - Fuel cycle simulations used for system potentialities, and performance assessments  
*Plutonium management, Minor actinide transmutation, Uranium savings,...*

Heddy Barale

- Towards a simultaneous optimization of fuel cycles and reactor designs :

Kévin Tirel

## ➤ This sessions :

- 9h15 - Tomohiro Okamura : **Development of nuclear fuel cycle scenario code “NMB4.0” for integral analysis from front to back end of nuclear fuel cycle**
- 9h45 - Heddy Barrale : **Simulation and validation of different nuclear fleets at equilibrium**

### *Coffee break*

- 10h30 - Barbara Vezzoni : **The CORAIL-A option for recycling plutonium in PWR: overview of the latest investigations at Framatome**
- 11h00 - Kévin Tirel : **Coupling fast reactor design and scenario calculations: a new methodology applied to scenario optimization**

## ➤ Topic for discussions :

- Link between fuel cycle studies and reactor simulations in different institutions ?
- Numerous fuel cycle simulators : strength or weakness ?
- Goals for fuel cycle developments ? Precise vs flexible ?
- How to cope with trust issues ?
